

The "Individual Animal" Cattle Induction System©

"Individual Animal" Tracking and Reporting!

The Cattle Induction System© was developed as a means of "inducting" individual animals into the Turnkey Feedyard Management System.

This is a **touch screen** application running at the processing chute, and can be tied to chute scale, and EID or Bar Code readers. Data collected by this application is shared with Turnkey's Feedyard Management, Feed Management, and Health Management Systems creating a single "individual animal" inventory for all users at the yard.

- Touch Screen
- Chute-side operation tied to office server via Radio Frequency
- Manual or Automated Operation
- Visual or EID Tags or both
- Tracks Origin, Load I.D., and Source/Premise I.D.
- Can index Feedyard Tags, Bar Code and/or EID to Producer Tags
- Sorting Capability
