- Multi-yard reporting capability per customer
- Provides remote access to company personnel via master password
- Customer data is hosted by Turnkey/No maintenance for feedyard

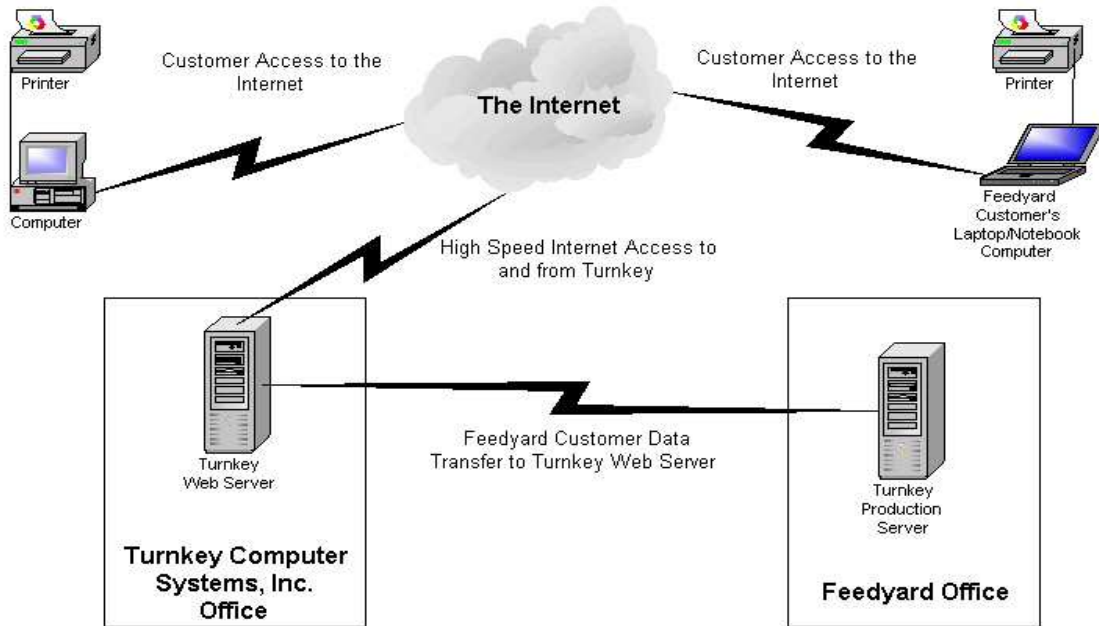

Included in this package: How the Web Reporting System works
How the System works, and pricing
Sample reports

~Introducing the new Turnkey Web Reporting System~

Turnkey has developed the Turnkey Web Reporting System to provide a customer information link between your Turnkey software and your company's Internet web page. Customers can connect to your web page, enter a customer number and password, and access owner-level cattle information via the Internet. The Web Reporting System is integrated into your feedyard's Web Page.

HOW THE WEB REPORTING SYSTEM WORKS

Description: In this configuration, the feedyard's customer information is transferred nightly to the Turnkey Web Server (data hosting). When a feedyard customer accesses the yard's Internet page, the yard's web server requests the customer's information from the Turnkey data-hosting server, and displays the report via the Internet.

Requirements: Yard should have a web site, although customer data can be presented without an Internet site.

Purchase Requirements:

- Turnkey Web Reporting System ----- \$3,995.00
- Web Reporting Installation and Set Up ----- \$ 250.00
- Monthly Data Hosting fee ----- \$ 100.00
(Additional monthly charge for multiple yards/servers)
