

DRIVING YOUR LEGACY FORWARD.

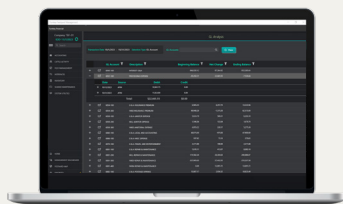

Financial software for the next generation.

Turnkey Financial® takes the best features of our industry-leading accounting solution to the next level. The result is a software package that lets operators work more efficiently. Even better, it's backed by the same customer service and support the cattle industry has come to expect from Turnkey.

Do more in fewer steps.

Turnkey Financial works more intuitively than previous versions of our accounting software. It incorporates a range of functions into a one-stop shop. Users can take advantage of seamless integrations between modules including accounts receivable, notes receivable, accounts payable, feed payable and general ledger.

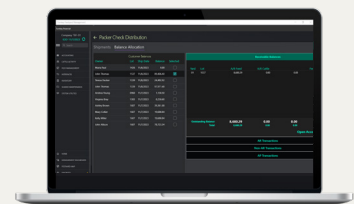

Our new solution also includes expanded reporting capabilities, simplified search tools, and bookmark functions for features customers use most. It runs on a flexible Windows interface that aligns with how you work best.

Streamlined general ledger information shows your feedyard's business health.

The lot dashboard keeps track of head counts, feeding and treatment expenses and sales transactions.

Packer check can be completed with fewer keystrokes using a single screen.

Flexible reporting options make information easy to share.

Customers have access to a suite of report templates that can be downloaded in PDF or CSV formats. Archived reports are easy to access and allow the user to view a previously run report with just a few keystrokes. Analysis screens provide an easy, efficient research of specific transactions across modules. Users can quickly filter or sort to find the information needed.

Processing packer checks is easier.

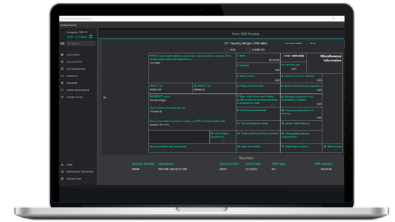

Packer checks can be deposited into your bank account. Proceeds are allocated for shipments on a specified date, outstanding balances can be viewed and remaining proceeds can be paid directly to the owner.

In a single screen, operators can view detailed check and cattle voucher information for packers.

Enhanced reconciliation simplifies banking.

With the new Turnkey Financial, users can import bank account details to reconcile matching transactions or identify if there are unmatched transactions. 1099 processes are also simplified with enhanced automation for new form creations and submission processes.

Turnkey Financial streamlines 1099 processes.

Multiple locations? We've got you covered.

Turnkey Financial is the perfect solution for multi-site operations. It can be used to track, compare and compile information across multiple source points. Reporting features can help you see profitability and make decisions regarding your feedyard's future.

Upgrade at the right time, over time. You're in control.

Turnkey Financial is the next step for customers looking to upgrade their entire Turnkey experience, but it doesn't have to be implemented all at once. Customers can use what they need and add additional functionality later.

Security features keep you in control.

Turnkey knows that protecting information is important, so we've incorporated solid security features. These include sign-on protocols and permission tools that help you decide which users can add, manage and export information.

Experienced installation, onboarding and support is available.

When you're ready to upgrade to Turnkey Financial, our experienced staff will guide you through the installation phase. We'll provide onboarding support and will work with you to customize the software so it works for your business. We'll also be available on an ongoing basis as you start to track data and create reports.
